

Editor's note

Dear theriogenology friends,

'A desire accomplished is sweet to the soul.' For me, it is a personal privilege to bring out yet another issue of our journal.

Forty colleagues have participated in preparing 6 manuscripts for this issue. It takes intentional collaboration and active participation in bringing a project to fruition. I thank our colleagues who worked on these projects and created manuscripts.

Mentors and team members of these manuscripts deserve our appreciation.

I thank the corresponding authors of these manuscripts who worked with me patiently during the review process, editing, and copyediting. My sincere thanks to 12 colleagues who assisted me in the review process.

Current issue covers projects in domestic and exotic species. Two articles describe anti-Müllerian hormone involvement in reproduction. It remains to be an important topic in human infertility. For example, its role in the pathogenesis of polycystic ovary syndrome and disorders of male infertility continues to be studied. Further clinical investigations in animals are necessary to understand the role of this hormone in fertility and infertility.

To colleagues who have agreed to serve as guest editors for our electronic issues, please give me an update (petera@purdue.edu) as soon as possible. I look forward to publishing our electronic issues.

Please continue to submit quality and well-written manuscripts. We are not quite there to submit our journal credentials toward PubMed indexing.

Regards,
Augustine
